Funding and In-Kind Support

This research used Cohere Labs Catalyst Grant API credits and Microsoft Azure for Students cloud credits for the LLM-based components included in the submission materials, including the stored Cohere and Azure OpenAI pairwise-judgment corpora and related protocol-audit analyses. The remote development workflow used in this research was also supported by complimentary lifetime access to Secure ShellFish, provided by Anders Borum.

Acknowledgments

The author thanks Professor Yiannis Koutis for his guidance and support. The author is also grateful to his mother for her continuous emotional support.
